

BP Correct

Use BP Correct to help you monitor your blood pressure accurately at home

You will need a BP monitor. Any BP monitor will work. However, there is a list of monitors that connect directly to the app on www.bpcorrect.com, or you may choose a validated monitor by searching on www.validatebp.org.

To get started--download the app (use QR code below) and register your account. Then:

Choose your BP monitor. If yours is not listed, choose "My blood pressure monitor is not listed. I will enter my blood pressure readings."

Set an AM and PM reminder to check your BP. If you need to change the times you first selected, click the bell icon.

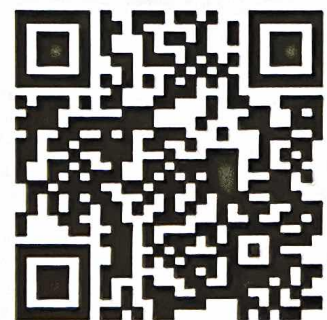

Click on the gear icon and then "Share readings with a practice." Then choose our practice.
